Product Description

Food Grade Xanthan Gum Powder CAS 11138-66-2 25 Kg Bagged 80 Mesh

Introduction to Xanthan Gum

Xanthan gum, aka yellow gum, is a kind of extracellular microbial with a wide range of functions produced by *Xanthomonas campestris* using carbohydrates as the main raw material (such as corn starch). A broad-acting microbial exopolysaccharide produced by fermentation engineering.

It has unique rheology, good water solubility, stability to heat, acid and alkali, and good compatibility with various salts. As a thickener, suspending agent, emulsifier, and stabilizer, it can be widely used. It is used in more than 20 industries such as food, petroleum, and medicine. It is currently the largest and most widely used microbial polysaccharide in the world.

1.Food:

- 1.Adding 0.2% to 1% in the juice can make the juice have good adhesion, good taste, control penetration and flow.
- 2.Using 0.25% in bread filling, food filling and icing can increase taste and flavor, smooth product structure, extend shelf life, and improve The stability of the product to heating and freezing;
3. Adding 0.1%~0.25% to ice cream, which can play an excellent stabilizing effect;
- 4.Providing good viscosity control in canned foods, which can replace part of starch. One part of xanthan gum can replace three to five parts of starch.

2.Oil Drilling:

B1. In the oil industry drilling, 0.5% xanthan gum aqueous solution can maintain the viscosity of the water-based drilling fluid and control its rheological properties, so that the viscosity of the high-speed rotating drill bit is extremely small, which greatly saves power consumption. The hole position maintains a high viscosity, which prevents the well wall from collapsing and facilitates the removal of the cutting debris from the well.
