Product Description

Intermediate In Organic Chemistry CAS 68-96-2 17A-Hydroxyprogesterone

17 α -OHP is a progesterone receptor agonist similar to progesterone, although less potent. It is also a chemical intermediate in the biosynthesis of hormones such as androgens, estrogenic sex hormones, glucocorticoids, mineralocorticoids.

Hydroxyprogesterone is a long-acting progesterone with progesterone activity 7 times that of progesterone and no estrogenic activity. After intramuscular injection, it is deposited locally, slowly released, and exerts a long-lasting effect, maintaining the time for 1 to 2 weeks.

Hydroxyprogesterone is combined with estradiol valerate as a long-acting injection contraceptive. It has an ovulation-inhibiting effect and is injected intramuscularly once a month. The contraceptive effect is certain.
