Product Description

Cosmetic Industries Ocimene with 98% Purity CAS 13877-91-3 Used as Edible Spices

Ocimene is a naturally occurring terpene found in various plants, including basil, lavender, and various citrus fruits. It is a colorless liquid with a sweet, herbaceous aroma. Ocimene is known for its pleasant fragrance and is often used in the production of perfumes, cosmetics, and other scented products.

There are three main isomers of ocimene: alpha-ocimene, beta-ocimene, and gamma-ocimene. Alpha-ocimene has a sweet, floral scent with hints of citrus, while beta-ocimene has a more woody and herbal aroma. Gamma-ocimene is characterized by its fresh, green scent.

In addition to its aromatic properties, ocimene is believed to have potential health benefits. It is thought to possess anti-inflammatory and antifungal properties, and it may also have insecticidal properties, acting as a natural repellent against certain pests.

Overall, ocimene is a versatile compound that contributes to the fragrance and therapeutic properties of many plants and is widely used in the fragrance and cosmetic industries.
