Product Description

Cas 5449-12-7 sodium,2-methyl-3-phenyloxirane-2-carboxylic acid

Sebacic acid is a chemical compound with the molecular formula C₁₀H₁₈O₄. It is a dicarboxylic acid that consists of a ten-carbon chain (decanedioic acid) with two carboxyl groups (-COOH) attached to it at each end.

Sebacic acid is a white crystalline solid that is odorless and soluble in water. It is derived from castor oil through a process called hydrolysis. It is primarily used in the production of polymers, such as nylon, polyester, and polyurethane.

One of the major applications of sebacic acid is as a building block in the synthesis of nylon-6,10. When combined with hexamethylenediamine, sebacic acid forms a polymer known as nylon-6,10, which possesses excellent tensile strength, chemical resistance, and heat resistance. Nylon-6,10 finds applications in various industries, including textiles, automotive components, and electrical insulation.
