Product Description

Treatment Of Hypocalcemia VITAMIN D3, 1ALPHA,25-DIHYDROXY CAS-32222-06-3

VITAMIN D3, 1ALPHA,25-DIHYDROXY is one of the most important active metabolites of vitamin 1 α , 25-D3. This metabolite is usually formed in the kidney. In recent years, it has been found that caltriol can also be produced outside the kidney. It has been confirmed that 1 α hydroxylase can produce caltriol in placenta, monocytes, macrophages, tumor cell supernatant, lymph nodes of patients with node disease and keratin cells. The precursor of calcitriol is 25-hydroxycholecalciferol (alfacalciferol). Dihydroxycholecalciferol can promote the absorption of calcium in small intestine and regulate the transport of inorganic salts in bone.

VITAMIN D3, 1ALPHA,25-DIHYDROXY is vitamin suitable for renal dystrophy, hypoparathyroidism, vitamin D-dependent rickets and vitamin D-resistant rickets in patients with chronic renal failure.
