Product Description

Raw Materials Of Health Care Products BETA-NICOTINAMIDE MONONUCLEOTIDE Cas 1094-61-7

Studies have shown that β -NMN can also regulate the secretion of insulin and affect the expression level of mRNA. It's also used in anti-aging research, β -NMN has a wide application prospect in the field of medical treatment. BETA-NICOTINAMIDE MONONUCLEOTIDE is converted into a substance called "nicotinamide adenine dinucleotide (NAD)" which is essential for energy metabolism in the body. In mouse experiments, niacinamide mononucleotides have been shown to activate a gene in the body called acetylated Chemicalbook enzyme, which can play a role in prolonging life and treating diabetes. NAD is a substance that the body can originally produce, and studies have shown that the amount of NAD in the body decreases with age.
