## Product Description

### New weight loss and fat lowering drug CAS 96829-58-2 Orlistat White Powder

#### New weight loss and fat lowering drug

Orlistat is a new type of weight loss and fat reduction drug recognized internationally. Orlistat is a long-acting, potent and specific gastrointestinal lipase inhibitor, which inactivates the above two Chemicalbook enzymes by forming covalent bonds with lipase active serine sites in the stomach and small intestine. The inactivated enzymes cannot decompose the fats in food into free fatty acids and glycerol that can be absorbed by the human body, thus reducing fat intake. Play a role in weight loss. This product also has the effect of regulating blood lipids: it can reduce triglycerides (TG), low-density lipoprotein cholesterol LDL-C and increase the ratio of high-density lipoprotein to low-density lipoprotein in the serum of obese patients.

#### Drug interaction

It can reduce the absorption of vitamins A, D and E. Use this product can also be supplemented. If you are taking A preparation containing vitamins A, D and E (such as some multivitamin preparations), you should take it 2 hours after taking this product or before going to bed. People with type 2 diabetes may need to reduce the dose of oral hypoglycemic drugs, such as sulfonylureas. When combined with cyclosporine, the plasma concentration of the latter can be reduced. When amiodarone is used in combination, it may lead to reduced absorption of the latter and decrease the efficacy.
